DATA SHEET**

CORK GRANULES

Description :

Cork Granules result from the braking and milling of cork waste, which originated from natural cork stopper manufacturing. Granulated cork is manufactured in our sophisticated plant, ensuring that the exact grain size and density of granules are obtained. This ensures that the end use of the granulated cork by our customers, will give the desired results at all times.

Granulated cork powder finds usage in the manufacture of composition cork and rubber cork, as well as being used independently for insulation in cold storage plants, insulation for buildings ensconced between concrete walls, etc. It is widely used as a frictional material in brake shoes and moulded clutch plates for the automotive industry.

Sizes :

Cork Granules are available in all sizes ranging from 0.5 mm to 16.0 mm. We also cater client specific sizes as per their custom requirements.
